This project comes under **Multi Linear Regression**

Reason: Multiple inputs and one output

Multi Linear Regression: **r2 score = 0.78**

Support Vectors Machine Sore based on passing parameters (kernel and C): **SVMR**

Kernel	C	R2 score
linear	C=10, C=100	-0.00161, 0.54
poly	C=10, C=100	-0.09311, -0.099
Rbf (default)	C=10, C=100	-0.0819, -0.124
sigmoid	C=10, C=100	-0.090 ,-0.118
precomputed	Not supports to our project. **Reason:** Precomputed matrix must be a square matrix.	

Decision Tree:
Sore based on passing parameters: ***criteria =squared_error=default and***

Splitter => best=default

criterion	splitter	R2 score
squared_error	best	**0.70**
absolute_error	best	**0.67**
poisson	best	**0.71**
squared_error	*random*	**0.68**
absolute_error	*random*	**0.63**
poisson	*random*	**0.63**

Random Forest:

criterion	max_features	*n_estimators*	R2 score
squared_error	float	50	0.85
absolute_error	float	50	0.84
poisson	float	50	0.85
squared_error	*sqrt*	50	0.87
absolute_error	*sqrt*	50	0.86
poisson	*sqrt*	50	0.87
squared_error	*Log2*	50	0.86

absolute_error	*Log2*	50	0.86
poisson	*Log2*	50	0.86
squared_error	*None*	50	0.85
absolute_error	*None*	50	0.85
poisson	*None*	50	0.85

The best model is Random Forest, and score is 0.87
