This project comes under **Multi Linear Regression**

Reason: Multiple inputs and one output

Multi Linear Regression: **r2 score = 0.93**

Support Vectors Machine Sore based on passing parameters (kernel and C): **SVMR**

Kernel	C	R2 score
linear	C=1, C=10, C=100	-38108093.90
poly	C=1, C=10, C=100	-38108093.90
Rbf (default)	C=1, C=10, C=100	-38108093.90
sigmoid	C=1, C=10, C=100	-38108093.90
precomputed	Not supports to our project. **Reason:** Precomputed matrix must be a square matrix.	

Decision Tree:
Sore based on passing parameters: ***criteria =squared_error=default and***

Splitter => best=default

criterion	splitter	R2 score
squared_error	best	**0.89**
absolute_error	best	**0.96**
poisson	best	**0.96**
squared_error	*random*	**0.33**
absolute_error	*random*	**0.33**
poisson	*random*	**0.33**

Random Forest:

criterion	max_features	*n_estimators*	R2 score
squared_error	float	50	0.94
absolute_error	float	50	0.93
poisson	float	50	0.94
squared_error	*sqrt*	5000[<500]	0.81(slow)[<0.80>
absolute_error	*sqrt*	5000[<500]	0.81(slow)[<0.80>
poisson	*sqrt*	5000[<500]	0.81(slow)[<0.80>
squared_error	*Log2*	5000[<500]	0.81(slow)[<0.80>

absolute_error	*Log2*	5000[<500]	0.81(slow)[<0.80>
poisson	*Log2*	5000[<500]	0.81(slow)[<0.80>
squared_error	*None*	50	0.94
absolute_error	*None*	50	0.93
poisson	*None*	50	0.94

The best model is Decision Tree, and score is 0.96
